EDUCATION

Hack Reactor Software Engineering Immersive   Graduated: Jan 2020
    Curriculum: Full Stack Javascript & Computer Science

University of California, Berkeley   Graduated: May 2017
    B.S. Economics & Policy

PROJECTS

BidWorld
Single page, full stack clone of ebay.com's auction page created using React, Node.js, Express, and MongoDB
– Collaborated in a team to build 4 individual services using service oriented architecture and rendered them together through an Express proxy server to display different item pages based on an item's ID
– Created user interface with Styled-Components for modularity and ease of conditional style rendering
– Automated component build and upload processes to Amazon S3 using webpack and Grunt
– Deployed Dockerized service components and proxy server to AWS EC2 instances for streamlined deployment
– Achieved 75%+ front-end unit test coverage by practicing test-driven development with Jest and Enzyme and implemented integration testing for API and database

Sorting Algorithms Visualizer
Educational tool and visual aid for learning different sorting algorithms built with React
– Experimented with various implementations of sorting algorithms to extract and animate comparison values
– Applied asynchronous Javascript to display sorting animations and handle button disabling and re-enabling
– Styled React UI with Reactstrap components and grid system for consistent and scalable design

Shortly
Server-side authentication system and other features for users to have their own private set of shortened URLs
– Built a session-based, server-side authentication system from scratch using Node.js, Express, and SQLite
– Created RESTful API to allow users to sign up, log in, view previously shortened links, and create new links

WORK EXPERIENCE

Cloudflare | San Francisco, CA   Nov 2017 - Oct 2019
Sales Operations Analyst
– Increased efficiency of lead generation efforts by writing a Python script to scrape DuckDuckGo search results
– Doubled output on JIRA tickets that required matching csv data against Salesforce by utilizing Salesforce API
– Worked cross-functionally with the finance team to integrate NetSuite with Salesforce to streamline billings
– Managed Salesforce and Tableau KPI dashboards and provided sales leaders with reporting and analytics

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, React, HTML, CSS, Bootstrap, Python, SQL
Database Related: MongoDB, Mongoose, MySQL, Sequelize, PostgreSQL
Other: Node.js, Express, Git, Jest, Enzyme, Styled-Components, Webpack, AWS, Grunt, Docker, Salesforce.com
